<b>CONTENTS</b>	
	<b>EXPLANATORY NOTES</b>
<b>SECTION</b>	
<b>A</b>	<b>FINANCIAL STATISTICS</b>
<b>A.1</b>	<b>DEPOSITORY CORPORATIONS' STATISTICS</b>
A.1.1	Monetary Survey: 1981 - 2006
A.1.2	Depository Corporations Survey from 2007
A.1.3	Quarterly Monetary Aggregates
A.1.4	Monetary Policy Targets and Outcomes (Growth Rates)
<b>A.2</b>	<b>CENTRAL BANKING STATISTICS</b>
A.2.1	Monetary Authorities' Analytical Accounts – Assets
A.2.2	Monetary Authorities' Analytical Accounts – Liabilities
A.2.3	Central Bank Accounts (1SR) – Assets
A.2.4	Central Bank Accounts (1SR) – Liabilities
A.2.5	Central Bank Survey
<b>A.3 – A.18</b>	<b>OTHER DEPOSITORY CORPORATIONS' STATISTICS</b>
A.3.1	Deposit Money Banks' Statement – Assets
A.3.2	Deposit Money Banks' Statement – Liabilities
A.3.3	Other Depository Corporations' Accounts (2SR) – Assets
A.3.4	Other Depository Corporations' Accounts (2SR) – Liabilities
A.3.5	Other Depository Corporations' Survey

A.4.1	Commercial Banks' Statement – Assets
A.4.2	Commercial Banks' Statement – Liabilities
A.4.3	Commercial Banks' Survey
A.5.1	Commercial & Merchant Banks' Accounts (2SR) – Assets
A.5.2	Commercial & Merchant Banks' Accounts (2SR) – Liabilities
A.5.3	Commercial & Merchant Banks' Survey
A.6.1	Non-Interest Banks' Accounts (2SR) – Assets
A.6.2	Non-Interest Banks' Accounts (2SR) – Liabilities
A.6.3	Non-Interest Banks' Survey
A.7.1	Primary Mortgage Banks' Accounts (2SR) – Assets
A.7.2	Primary Mortgage Banks' Accounts (2SR) – Liabilities
A.7.3	Primary Mortgage Banks' Survey
A.8.1	Microfinance Banks' Accounts (2SR) – Assets
A.8.2	Microfinance Banks' Accounts (2SR) – Liabilities
A.8.3	Microfinance Banks' Survey
A.9	Deposit Money Banks' Loans and Advances
A.10	Sectoral Distribution of Commercial Banks' Loans and Advances
A.11	Money Market Interest Rates (Per Cent)
A.12	Weighted Average Deposit and Lending Rates of Deposit Money Banks (Per Cent)
A.13	Selected Financial Ratios of Commercial Banks (Percentage)
A.14	Deposits and Loans of Rural Branches of Commercial Banks
A.15.1	Number of Commercial Banks' Branches in Nigeria and Abroad

A.15.2	Number of Deposit Money Banks' Branches in Nigeria (by States) and Abroad
A.16	Commercial Banks' Loans to Small Scale Enterprises
A.17	Consolidated Bankers' Clearing House Statistics
A.18	Payments System Statistics
<b>A.19 &amp; A.20</b>	<b>DEVELOPMENT AND SPECIALISED FINANCIAL INSTITUTIONS</b>
A.19	Finance Houses – Summary of Assets and Liabilities
A.20	Number of Development & Specialised Banks/Institutions
<b>A.21</b>	<b>CAPITAL MARKETS</b>
A.21.1	Transactions at the Nigeria Stock Exchange
A.21.2	All Share Index on the Nigeria Stock Exchange
A.21.3	Total Annual Market Capitalization on the Nigeria Stock Exchange
A.21.4	Nigeria Stock Exchange Market Capitalization – Equities Only
<b>A.22</b>	<b>INSURANCE COMPANIES</b>
A.22	Consolidated Balance Sheet of Insurance Activities (General & Life Business)
<b>A.23</b>	<b>MONEY MARKET AND GOVERNMENT SECURITIES</b>
A.23.1	Value of Money Market Instruments Outstanding as at End-Period
A.23.2	Treasury Bills: Issues and Subscriptions
A.23.3	Treasury Bills: Issues, Subscriptions and Allotments
A.23.4	Holdings of Treasury Bills Outstanding
<b>A.24</b>	<b>SAVINGS STATISTICS AND FINANCIAL DEEPENING</b>
A.24.1	Savings Statistics – Cumulative

A.24.2	Selected Financial Deepening Indicators
<b>B</b>	<b>PUBLIC FINANCE STATISTICS</b>
<b>B.1</b>	<b>FEDERAL GOVERNMENT FINANCES</b>
B.1.1	Summary of Federal Government Finances
B.1.2	Federal Government Recurrent Expenditure
B.1.3	Federal Government Capital Expenditure
B.1.4	Federal Government's Domestic Debt Outstanding
B.1.5	Holdings of Federal Government's Domestic Debt Outstanding
B.1.6	Nigeria's Public External Debt Outstanding
<b>B.2</b>	<b>STATE GOVERNMENTS' FINANCES</b>
B.2.1	Summary of State Governments' and Federal Capital Territory's Finances
B.2.2	Domestic Debt of State Governments
<b>B.3</b>	<b>LOCAL GOVERNMENTS' FINANCES</b>
B.3.1	Summary of Local Governments' Finances
B.3.2	Local Governments' Total Debt Outstanding
B.3.3	Summary of Federation Account Allocation Committee (FAAC) to All Tiers of Government
<b>C</b>	<b>DOMESTIC PRODUCTION, CONSUMPTION AND PRICES</b>
<b>C.1</b>	<b>PRODUCTION AND CONSUMPTION</b>
C.1.1	Gross Domestic Product at Current Basic Prices - Annual
C.1.2	Gross Domestic Product at 2010 Constant Basic Prices - Annual
C.1.3	Implicit Price Deflator - Annual

C.1.4	Gross Domestic Product at Current Basic Prices - Quarterly
C.1.5	Gross Domestic Product at 2010 Constant Basic Prices - Quarterly
C.1.6	Implicit Price Deflator - Quarterly
C.1.7	Gross Domestic Product by Expenditure and Income at Current Purchasers' Prices - Annual
C.1.8	Gross Domestic Product by Expenditure and Income at 2010 Constant Purchasers' Prices - Annual
C.1.9	Gross Domestic Product by Expenditure and Income at Current Purchasers' Prices - Quarterly
C.1.10	Gross Domestic Product by Expenditure and Income at 2010 Constant Purchasers' Prices - Quarterly
<b>C.2</b>	<b>PRICES</b>
C.2.1	Inflation Rates: Headline, Core and Food - Monthly
C.2.2	Composite Consumer Price Index (Base: November 2009)
C.2.3	Consumer Price Index (Base: November 2009) - Urban
C.2.4	Consumer Price Index (Base: November 2009) - Rural
<b>C.3</b>	<b>AGRICULTURAL CREDIT GUARANTEE SCHEME FUND (ACGSF) OPERATIONS</b>
C.3.1	ACGSF Operations - Value of Loans Guaranteed
C.3.2	ACGSF Operations - Number of Loans Guaranteed on State Basis
C.3.3	ACGSF Operations - Value of Loans Guaranteed on State Basis
C.3.4	ACGSF Operations - Loans Fully Repaid and Analysed on State Basis
C.3.5	ACGSF Operations - Cumulative Loans Guaranteed on Value Group Basis
C.3.6	ACGSF Operations - Cumulative Loans Guaranteed on Category Basis
<b>C.4</b>	<b>MANUFACTURING CAPACITY UTILISATION</b>
C.4.1	Average Manufacturing Capacity Utilisation

C.4.2	Average Manufacturing Capacity Utilisation ... Continued
<b>C.5</b>	<b>RAINFALL STATISTICS</b>
C.5.1	Monthly Rainfall Statistics in Some Nigerian Towns
<b>C.6</b>	<b>POPULATION FORECAST OF NIGERIA</b>
C.6.1	Population Forecast of Nigeria
<b>D</b>	<b>EXTERNAL SECTOR STATISTICS</b>
<b>D.1</b>	<b>INTERNATIONAL TRADE STATISTICS</b>
D.1.1	Foreign Trade: Oil and Non-Oil
D.1.2.1	Value of Major Imports Groups by S.I.T.C Sections
D.1.2.2	Imports by H. S. Section
D.1.3	Export Commodity Price Index (Base Period: January 2007)
D.1.3.1	Export Commodity Price Index (Base Period: January 2018)
D.1.4	Import Commodity Price Index (Base Period: January 2007)
D.1.4.1	Import Commodity Price Index (Base Period: January 2018)
D.1.5	Commodity Terms of Trade (Base Period: January 2007)
D.1.5.1	Commodity Terms of Trade (Base Period: January 2018)
<b>D.2</b>	<b>BALANCE OF PAYMENTS AND INTERNATIONAL INVESTMENT POSITION</b>
D.2.1.1	Balance of Payments – Analytical Statement (1981 – 1993)
D.2.1.2	Balance of Payments – Analytical Statement (1994 – 2004)
D.2.1.3A	Balance of Payments Compilation – (₦ Billion)
D.2.1.3B	Balance of Payments Compilation – (US\$ Million)

D.2.1.4A	Balance of Payments BPM6 Compilation – (₦' Billion)
D.2.1.4B	Balance of Payments BPM6 Compilation – (US\$' Million)
D.2.2.1A	International Investment Position – (₦' Billion)
D.2.2.1B	International Investment Position – (US\$' Million)
D.2.2.2A	International Investment Position – BPM6 (₦' Billion)
D.2.2.2B	International Investment Position – BPM6 (US\$' Million)
<b>D.3</b>	<b>EXTERNAL RESERVES AND MONTHS OF IMPORT COVER</b>
D.3.1	External Reserves
D.3.2	External Reserves Adequacy – Months of Import Cover
<b>D.4, D.5 &amp; D.6</b>	<b>EXCHANGE RATE STATISTICS</b>
D.4.1	Monthly Average Official Exchange Rate of the Naira
D.4.2	Monthly Average (AFEM/DAS) Exchange Rates of the Naira – Central Rate
D.4.3	Average Naira Official Cross Exchange Rates – Selling
D.4.4	Average AFEM/DAS Naira Cross Exchange Rates – Selling
D.4.5	Naira Official Cross Exchange Rates – End-Period
D.4.6	End-Period Naira Cross Exchange Rates – Selling
D.4.7	Monthly Official Exchange Rate – End-Period
D.4.8	Monthly Average Exchange Rate Movements at BDC, IFEM and I & E Segments of the FOREX Market
D.4.9	Computed Relative Purchasing Power Parity (RPPP) Exchange Rate with Percentage Overvaluation and Undervaluation
D.4.10.1	Bilateral Real Exchange Rate – End-Period Exchange Rate

D.4.10.2	Bilateral Real Exchange Rate – Average Exchange Rate
D.4.11	Nominal Effective Exchange Rate Indices for Nigeria
D.4.12.1	Nominal Effective Exchange Rate Indices for Nigeria – End-Period Exchange Rate
D.4.12.2	Nominal Effective Exchange Rate Indices for Nigeria – Average Exchange Rate
D.4.13.1	Real Effective Exchange Rate Indices for Nigeria – End-Period Exchange Rate
D.4.13.2	Real Effective Exchange Rate Indices for Nigeria – Average Exchange Rate
D.5.1	Sectoral Utilization of Foreign Exchange for Transactions Valid for Foreign Exchange
D.5.2	Sectoral Utilization of Foreign Exchange for Transactions Valid for Foreign Exchange – Continued
D.5.3	Supply of Foreign Exchange
D.6.1	Cash Flow
<b>D.7</b>	<b>FOREIGN INVESTMENT STATISTICS</b>
D.7.1.1	Capital Importation by Type of Investment
D.7.1.2	Capital Importation By Nature of Business
D.7.1.3	Capital Importation by Country of Origin
D.7.2	Coordinated Direct Investment Survey

## EXPLANATORY NOTES

### SECTION A: FINANCIAL STATISTICS

Financial data are normally compiled from balance sheets and financial statements which are primarily designed to meet a variety of legal and administrative requirements, as well as the specific needs of economic analysis. Financial data compilation involves the aggregation of the financial system's accounts to the level at which general macroeconomic tendencies are discernible.

Effective end-December 2019, the Bank fully adopted the Standardized Report Forms (SRFs) for compiling, presenting, and disseminating monetary statistics as well as policy decisions in line with the IMF Monetary and Financial Statistics Manual 2000 (MFSM) and the 2008 Monetary and Financial Statistics Compilation Guide (MFS Guide). The SRFs contain more detailed coverage of the classification, economic sectorization, currency denomination, valuation, and recording of financial assets and liabilities in the economy. Although both the non-SRF and SRF tables are presented in this publication, the non-SRF data series stopped at end-December 2020 while the SRF reporting templates are used going forward with historical data from end-December 2007.

The consolidated accounts of the monetary authorities/central bank, which are shown in Tables A.2.1 – A.2.5 are derived from different sub-accounts of the CBN operations. The Finance Department generates the CBN Analytical Balance Sheet (ABS) using data obtained from the general ledger on the Oracle ERP application. This is forwarded to the Statistics Department as an input for central bank survey. Similarly, the consolidated balance sheets of deposit money banks/other depository corporations (ODCs) are downloaded from Financial Analysis Application (FinA) as inputs for ODCs' account which are shown in Table A.3.1 – A.3.5. The balance sheets of the central bank and ODCs are consolidated to produce depository corporations survey shown on Tables A.1.1 – A.1.2. Balance sheets of the different ODCs are provided in Tables A.4.1 – A.8.3.

Money market interest rates are captured on Table A.11. Monthly interest rate returns of ODCs are used to compute the weighted average lending and deposit rates, using as weights, amount lent for various rates and total depositors' funds, respectively. The deposit rates: savings and time/term deposit of various maturities ranging from 7 days to over 12 months are also computed (Tables A.12). The sectoral allocation of ODCs' loans and advances, financial ratios of commercial banks as well as deposits and loans statistics etc., are covered in Tables A.9, A.10, A.13, A.14 and A.16, respectively. ODCs branches and subsidiaries are in Tables A.15.1 and A.15.2.

Clearing house statistics show the number and value of cheques cleared within the banking system (Table A.17); payments system statistics follow on Table A.18. Assets and liabilities of development and specialised financial institutions are presented in Tables A.19 – A.20. Capital Market statistics are provided in Tables A.21.1 – A.21.4, and

statistics on insurance activities are given in Table A.22. Tables A.23.1 – A.23.4 focused on money market instruments and treasury bills, while savings statistics and financial deepening indicators are captured in Tables A.24.1 and A.24.2, respectively.

## **SECTION B: GOVERNMENT FINANCE STATISTICS**

The fiscal sector indicators are the revenue, expenditure, and public debts (domestic and external) of the Federal, State and Local Governments. Revenue is an inflow of resources or money into the government sector from other economic units/sectors. It includes all non-repayable receipts and grants and is divided into current and capital. While current revenue comprises tax and non-tax receipts within a given period, capital revenue are receipts from non-financial assets used in production process for more than one year. Grants are non-compulsory, non-repayable unrequited receipts from other governments and international institutions. Expenditure is an outflow of resources from government to other sectors of the economy whether required or unrequited. It is divided into recurrent and capital expenditures. While recurrent expenditures are payments for salaries and overheads, capital expenditures are payments for non-financial assets.

The difference between government payments for expenditure and total receipts from revenue could either be surplus or deficit. If revenue is greater than expenditure, there is a surplus, but when expenditure is greater than revenue, we have a deficit. Financing represents government's sources of meeting deficit or utilizing surplus. Sources of financing are divided into domestic and foreign. Debt (domestic and external) is a stock of liabilities with different tenors accumulated by government operations in the past and scheduled to be fully repaid by government in the future. It covers only recognized direct financial obligations of government on which government pays interest on redemption. External debt figures in the tables are converted to Naira using annual average exchange rate of the particular year.

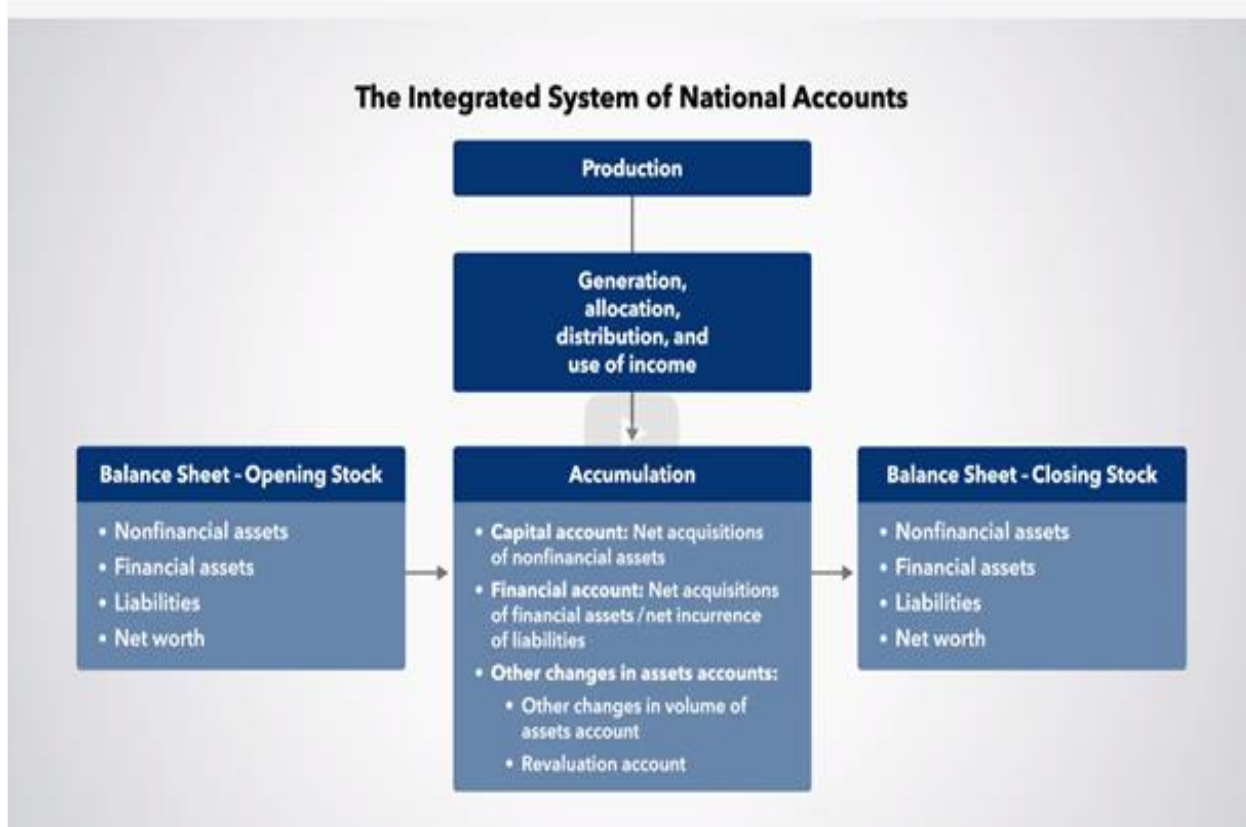

## **SECTION C: REAL SECTOR STATISTICS**

### **SECTION C.1: NATIONAL ACCOUNTS**

The System of National Accounts (SNA) is a consistent, coherent and integrated set of macroeconomic accounts; balance sheets and tables based on a set of internationally agreed concepts, definitions, conventions, classifications and accounting rules. It provides a comprehensive accounting framework within which economic data can be compiled and presented in a format that is designed for purposes of economic analysis, policy making and decisions. The compilation of the National Accounts Statistics presented in this bulletin is based on the same principles recommended in the 2008 System of National Accounts (2008 SNA). The SNA runs a sequence of accounts to generate macroeconomic aggregates that guide policy decisions and assist in gauging the performance of an economy. There are three major accounts in the sequence of accounts: the current account, accumulation account, and the balance sheets. The

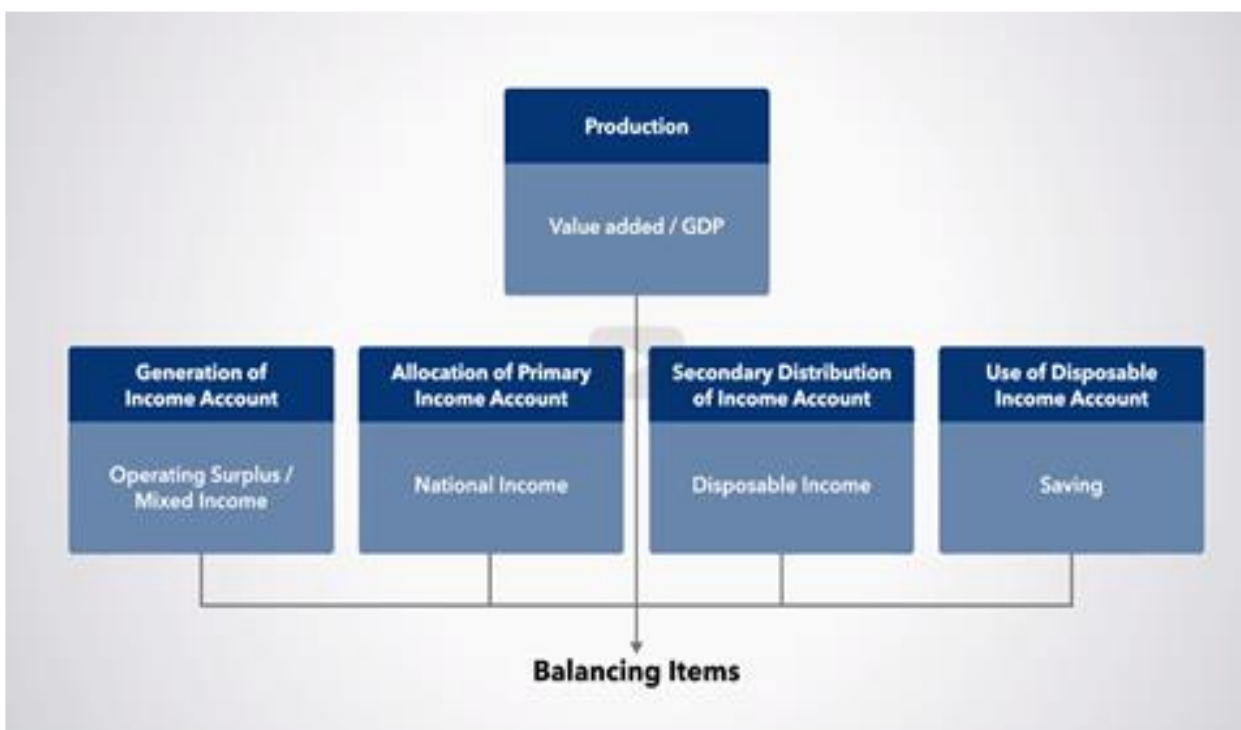

transactions in one account affect the transactions in the subsequent accounts. Most of the data captured in this publication are compiled within the current account and the accumulation account as presented in the relevant tables.

### The Sequence of Accounts

*Source: International Monetary Fund (IMF 2021)*

The current account consists of five sub-accounts: *production account, generation of income account, allocation of primary income account, secondary distribution of income account, and use of disposable income account*, which are flow accounts that account for production, income, consumption and savings in an economy. These accounts generate very important economic aggregates which are derived as balancing items from each of the accounts. Some of the aggregates produced under the current account include the *value added or gross domestic product (GDP), gross national income (GNI), gross national disposable income (GNDI), and national savings*.

Source: International Monetary Fund (IMF 2021)

The accumulation account consists of the *capital account*, *financial account*, and *Other Changes in the Volume of Assets Account (OCVA)*. The capital account records transactions in nonfinancial assets, while the financial account records transactions in financial assets and liabilities. The other changes in the volume of assets account shows changes in nonfinancial assets, financial assets, and liabilities that are not the result of transactions. The capital account shows how saving and capital transfers are used to fund capital formation. Capital formation consists of *gross fixed capital formation*, the *change in inventories*, and the net acquisition of valuables. *Gross fixed capital formation is the acquisition of assets used in production such as buildings, machinery, and intellectual property products.*

The various National Accounts tables presented in this publication were compiled by the National Bureau of Statistics (NBS) in line with the 2008 SNA. Apart from reporting these statistics in their nominal values using market prices, the NBS also provides their values in real terms using the 2010 Price Deflators as the base period.

### Table C.1.1

- i. The Gross Domestic Product (GDP) is the monetary value of goods and services produced in an economy during a specific period irrespective of the nationality of the people who produced the goods and services. It is calculated without making deductions for depreciation. The concept behind GDP compilation is to measure gross value added after deducting the cost of inputs used in production (intermediate consumption) from the gross output value.
- ii. GDP at Current Basic Prices (i.e. Nominal GDP) equals GDP at Current Market Prices less indirect taxes net of subsidies.

**Table C.1.2**

- i. GDP at Constant Basic Prices (otherwise known as the real GDP) equals GDP at Market Prices less indirect taxes net of subsidies.
- ii. GDP at Current Market Prices equals GDP at Current Basic Prices plus indirect taxes net of subsidies. This is GDP valued at the market prices which purchasers pay for the goods and services they acquire or use.

**Table C.1.3**

Implicit Price Deflator is GDP at current basic prices divided by GDP at constant basic prices. The ratio is used to account for the effects of inflation by reflecting the changes in the prices of bundles of goods and services that make up the GDP as well as changes in the bundles themselves.

**Tables C.1.7 – C1.10**

GDP by Expenditure (at current purchasers' value and 2010 constant purchasers' prices) and by Income on annual and quarterly frequencies:

- i) GDP by expenditure based - is total final expenditure at purchasers' prices (including the f.o.b value of exports of goods and services) less the f.o.b value of imports of goods and services.
- ii) GDP by income based - is compensation of employees, plus taxes less subsidies on production and imports, plus gross mixed income and operating surplus
- iii) Gross Fixed Capital Formation - is expenditure on fixed assets (such as building, machinery) either for replacing or adding to the stock of existing fixed assets.
- iv) Gross Capital Formation (i.e. Gross Domestic Investment) - is the total change in the value of fixed assets plus change in stocks.
- v) Private Consumption-Household Final Consumption  
Household actual final consumption consists of the consumption of goods or services acquired by individual households by expenditures or through social transfers in kind, received from government units or Non-Profit Institutions Serving Households (NPISHs). The value of household actual final consumption is given by the sum of the two components:
  - a) The value of household expenditures on consumption of goods or services including expenditures on non-market goods or services sold at prices that are not economically significant.
  - b) The value of the expenditures incurred by the NPISH, on Individual consumption of goods or services provided households as social transfers in kind.

- vi) Government Final Consumption Expenditure consists of expenditure, including imputed expenditure incurred by general government of both individual consumption of goods and services and collective consumption of services. This expenditure may be divided into:
  - a) Government expenditure on individual consumable goods and service
  - b) Government expenditure on collection consumption
- vii) Gross Consumption Expenditure is equal to Private Consumption Expenditure plus Government Consumption Expenditure
- viii) Gross National Savings show the amount of domestic and foreign investment financed from domestic output, comprising public and private savings. It is gross domestic investment plus the net exports of goods and non-factor services.
- ix) GDP 2010 Basic Prices is the GDP at 2010 Producers Price less taxes on expenditure plus subsidies.
- x) GDP at Current Basic Prices is the GDP at Producers Price less taxes on expenditure plus subsidies.

#### **Tables C.1.4 and C.1.5**

Quarterly GDP at Current Basic Prices and 2010 Constant Basic Prices span across 2010:Q1 – 2020:Q4.

#### **Tables C.1.6**

Quarterly implicit price deflators were arrived at by dividing the nominal quarterly GDP series by the corresponding real quarterly GDP.

### **SECTION C.2: PRICES**

#### **Table C.2.1**

This table shows monthly consumer price indices and inflation rates given in three forms: - headline, core and food. The inflation rate is designed to measure the rate of increase of a price index. It is a percentage rate of change in price level over time.

The first CPIs were computed separately for the then Federal and Regional Capitals. The indices for Lagos, and Ibadan, Kaduna, Enugu had 1953 and 1957 as base years, respectively. The CBN in collaboration with Federal Office of Statistics (FOS) now National Bureau of Statistics (NBS), felt that computing separate indices had some disadvantages. The Consumer Expenditure Survey (CES) conducted in 1957 was reviewed to reflect the need for a single national CPI based on the prices of a union

market basket of commodities purchased and consumed by a representative set of households in selected centres from all over the country, especially since the indices from one centre to another made comparability difficult.

A more serious limitation of the index then, was the absence of a composite consumer price index to measure average change in the price of goods and services purchased by the specified groups of consumers. As a result of this limitation, a common base was derived for all-cities index by averaging prices in 1960. In selecting every consumer item, the prices index for any given period was adjusted on the basis that the average price index for the same item in 1960 is 100. As consumption patterns change over time, a set of item weights obtained in a particular CES progressively become outdated. The changing consumption pattern of households is mirrored in the results of CES taken at regular intervals, which gives rise to new markets and constitute item weights. With the National Consumer Expenditure survey (NCES) conducted by NBS in 1974/75 which provided expenditure data from which item weights were derived for urban and rural indices, the CPI adopted 1975 as the ruling base year.

However, CPI is continually updated and rebased and that informed the updating of the base period to 1985 from the CES of 1980/81. The CES was updated in view of the time lag between the period of the survey and the time the detailed analysis was completed (1986). The mean expenditures were consequently re-valued to take account of the time lag. Relative price changes between 1980 and 1985 were employed to update the CES estimates to 1985 values. Such relative price changes were derived from the 1975 CPI baskets when considered state by state. For entirely new items, as new items and classification were introduced, relative price changes were compiled and utilized for the updating.

The basket of the 1985-based CPI has been restructured to indicate commodity groups such as medical care and health expenses, recreation, entertainment, education and cultural services which were not classified when 1975 base was used. Due to changes in consumption patterns overtime, NBS conducted another CES between March 1996 and April 1997, and item weights derived from the survey data were updated to May 2003, the price reference period of the CPI series. The basket for the survey was a re-structured version of the former basket, because the classification of individual consumption by purpose (COICOP) was adopted. It consists of twelve major commodity groups and eighty-five subgroup indices. Currently, the consumption expenditure data are re-valued to a new base period of November 2009, using the Nigerian Living Standard Survey (NLSS) outcome of 2003/2004 to arrive at the CPI series for *all items, all items less farm produce and food* categories. The monthly indices in the Table C.2.1 span 1995 to 2020.

### **SECTION C.3: AGRICULTURAL CREDIT GUARANTEE SCHEME FUND (ACGSF)**

#### **Tables C.3.1, C.3.2, C.3.3, C.3.4, C.3.5 and C.3.6**

These Tables are on the operation of ACGSF, an initiative of the Central Bank of Nigeria. The Scheme started operation in 1978 with an initial capital base of ₦100 million

shared in a ratio of 60:40 between Federal Government of Nigeria and Central Bank of Nigeria. The capital base of the scheme has been raised to ₦3 billion managed by the Central Bank of Nigeria. The ACGSF is meant to share the risks of banks in agricultural lending and hence encourage them to continue to extend credit to the agricultural sector.

## **SECTION D: EXTERNAL SECTOR STATISTICS**

### **SECTION D.1: INTERNATIONAL TRADE**

International trade takes place between residents in the reporting economy and the rest of the world (ROW). International Trade Statistics (ITS), therefore, measure the quantities and values of goods that move into or out of a country. In other words, ITS refer to imports and exports unadjusted for Balance of Payments (BOP). They are compiled from customs bills of entry, which are usually completed by importers and exporters, indicating the quantities and values of goods imported into or exported out of the compiler economy. ITS can also be derived from records of transactions in foreign exchange where customs data are not available.

For analytical purposes, Nigeria's ITS is presented using the format of the Standard International Trade Classification (SITC), which has 10 main groups, with codes 0 – 9. These are:

0. Food and Live Animals;
1. Beverages and Tobacco;
2. Crude Materials, Inedible;
3. Mineral Fuels;
4. Animal and Vegetable Oils;
5. Chemicals;
6. Manufactured Goods;
7. Machinery and Transport Equipment;
8. Miscellaneous Manufactured Goods; and
9. Miscellaneous Transaction

### **SECTION D.2: BALANCE OF PAYMENTS AND INTERNATIONAL INVESTMENTS POSITION**

The BOP is defined as a systematic record of economic and financial transactions for a given period between residents of an economy and non-residents. These transactions involve the provision and receipts of real resources and changes in claims on, and

liabilities to, the ROW. Specifically, it records transactions in goods, services and income, as well as changes in ownership and other holdings of financial instruments, including monetary gold, Special Drawing Rights (SDRs) and claims on, and liabilities to, the ROW. The BOP also records current transfers - the provision or receipt of an economic value without the acceptance or relinquishing of something of equal value, or quid pro quo.

Generally, transactions involving payments to residents of an economy by non-residents are classified as "Credit" entries, while payments by the residents of an economy to non-residents are "Debit" entries. Tables D.2.1.1 – D.2.1.4B present the BOP tables from 1981 up to 2020.

The method of BOP compilation has been reviewed five times by the International Monetary Fund (IMF). The fifth edition of the BOP compilation Manual – Balance of Payments Manual 5 (BPM5) provides an expanded conceptual framework to encompass both BOP flows (transactions) and stock of external financial assets and liabilities otherwise called the International Investment Position (IIP). In this edition, compilation with the latest IMF manual – BPM6 span 2014 – 2020 and 2010 – 2020 for BOP and IIP statistics, respectively (D.2.1.4A, D.2.1.4B, D2.2.2A and D.2.2.2B).

However, the editions of the Manual provide flexibility in the sense that although more details are provided for in the revised editions, the overall presentations do not change significantly. The BOP tables D.2.1.1 – D.2.1.4B provide information on vital components of the account, showing the various changes in presentations highlighted by the editions of the manual that have been in use.

Basically, following the BPM5, the BOP table is usually divided into two main sections, namely the Current Account, and the Capital and Financial Account; and the Net Errors and Omissions, which is a balancing item.

### **Current Account**

The Current Account is divided into two major sections; visible and invisible. The visible account consists of Goods Account (exports and imports), which are tangible physical commodities, movement of which constitutes merchandise trade. Exports are "Credit" entries as non-residents acquiring goods have to pay the exporting country. Imports are "Debit" entries as the importer has to use up his stock of foreign currencies to pay for the imported goods.

In the balance of payments table, the value of exports and imports are recorded "free-on-board" (F.O.B.) to show the actual costs of the goods without insurance and freight, both of which are treated in the Services section of the current account. The services include transport, freight, travels, insurance and other business services. Entries are either credit or debit depending on whether the charges are received or paid by the reporting economy.

The Investment Income aspect of invisibles refers to accrued income on existing foreign financial assets. This income may be profits, interest, dividends and royalties

received by or paid to direct and portfolio investors. It may also be interest and commitment charges on loans (Other Investment Income).

The "Current Transfers" is the fourth sub-account under the Current Account. It is a unilateral transfer by the reporting economy to the ROW or vice versa without an equivalent value in exchange. It is usually classified as private (other sector) or official (government). Private transfers include home remittances by migrant workers or private sector grants to educational institutions, etc. Official transfers are by way of grants, subscriptions, technical assistance, etc. to governments and other official agencies. Transfers received are recorded as credit items, while outflows are debits to the reporting economy.

*The sum total of the balances of these sub accounts namely: Goods, Services, Income and Current Transfers make up the Current Account.*

### **Capital and Financial Account**

The Capital and Financial Account captures changes in a country's foreign assets and liabilities, capital movements and changes in international investment position. Capital may be long or short-term, and private or public (government). Furthermore, investment, as a major component of financial account is "Direct" if it creates or establishes a permanent controlling interest in an enterprise; and the investor has equity ownership of at least 10 per cent. "Portfolio Investment" covers the acquisition and disposal of equity and debt securities (instruments), which cannot be classified under direct investment.

Capital inward movements may take place between a reporting economy and the ROW by injection of new loans and investments into the reporting economy by foreigners. This movement may take the form of increases in foreign owned deposits in the banks of the domestic (reporting) economy. The latter may decide to recover its loans and investments, as well as bank deposits abroad. These are examples of credit entries. Capital flows through new loans and increases in deposits in foreign banks by the reporting economy, constitute "debit entries". The capital transfers component of unrequited transfers is included in the capital account of the balance of payments.

In general, under the double-entry accounting system, all debit and credit entries should be equal. If this happens to all the items in both the current and capital accounts, it will be easy to ascertain the net change in assets and liabilities of the reporting economy by establishing the balance on both current and capital accounts. However, this equality does not always hold in reality as either the debit or credit is usually understated. Thus, provision is made in the "errors and omissions".

### **Net Errors and Omissions**

Differences between debits and credits in the current and the capital and financial accounts are balanced through the Errors and Omissions component of the BOP. Data from both sides of a single transaction arise from independent sources leading to discrepancies. In addition, different values may be given to the same item at each valuation point and the item may be completely omitted at one of the valuations. A

credit balance on the Net Errors and Omissions Account shows that the credit items are under-estimated, while a debit balance indicates an understatement of debit items.

The BPM6 presentation of the BOP is, however, divided into three sections – the current account, the capital account, the financial account; and the net errors and omission as the balancing item.

#### **SECTION D.4: EXCHANGE RATES**

The foreign exchange and exchange rate management in Nigeria has undergone transformation over the years. It has moved from officially pegged exchange rate system between 1970 and 1985 to a market-determined system since 1986. The naira exchange rate is now determined through the foreign exchange market on the basis of demand and supply. The dollar is the intervention currency in the market; while the exchange rates of other currencies are based on cross reference to the naira - dollar exchange rate.

The trade-weighted Nominal Effective Exchange Rate (NEER) indices for Nigeria represent the value of the Naira in terms of a weighted basket of currencies. The weights represent the relative importance of each currency to the Nigerian economy. In other words, it represents the share of each of the selected countries in Nigeria's total trade. Therefore, the NEER index measures the average change of the Naira's exchange rate against all other currencies.

In constructing the NEER index, the geometric approach was adopted, while *ab initio*, 10 major trading partners, which control about 76.0 per cent of Nigeria's trade with the ROW were selected. These are: Belgium, France, Germany, Italy, Japan, Netherlands, Spain, Switzerland, United Kingdom and United States of America. However, following the dynamism in Nigeria's International Trade, there had been some modifications in the group of selected trading partners. Thus, the following 19 are the current major trading partners: Belgium, Brazil, China (Mainland), Cote d'Ivoire, France, Germany, Ghana, India, Indonesia, Italy, Japan, Netherlands, South Africa, South Korea, Spain, Sweden, United Arab Emirates, United Kingdom and United States of America.
